DETAILED ACTION

This Office Action is in response to the arguments filed 11 August 2004.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kitagawa (U.S. Patent 5,329,142) and further in view of Shirley (US Publication 2004/0062110).

Kitagawa discloses a semiconductor device (Figs. 2,6,7 and 27) that contains a memory cell with two gated complementary vertical bipolar transistors that are p-n-p and n-p-n transistors (Q) where the collector region of the p-n-p is connected to the base region of the n-p-n where the transistors have states for storing information. Kitagawa discloses all the limitations except for a computer system with a processor connected to the memory circuit. Whereas Shirley discloses a SRAM (Fig. 5) that contains a computer system with a processor (104) connected to the memory circuit (408). The computer system is added to process the stored information of the memory cells. (Page 4, Paragraph 30/31) Therefore it would have been obvious to one having

Art Unit: 2822

ordinary skill in the art at the time the invention was made to incorporate a computer system to process the stored information of the memory cells as taught by Shirley.

Allowable Subject Matter

Claims 1-5,7-20,23-27 and 55 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 1-5,7-20 and 23-27 are allowable because prior art does not show alone or in combination along with the limitations of the independent claims such as, the first and second gates being connected to the first vertical side and second vertical side of the vertically stacked bipolar transistors (spanning central n-region of p-n-p transistor and p-region on n-p-n transistor).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 29-33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claim 1-5,7-20,23-33 and 55 have been considered but are moot in view of the new ground(s) of rejection.
